

## ZVT® Crossbow

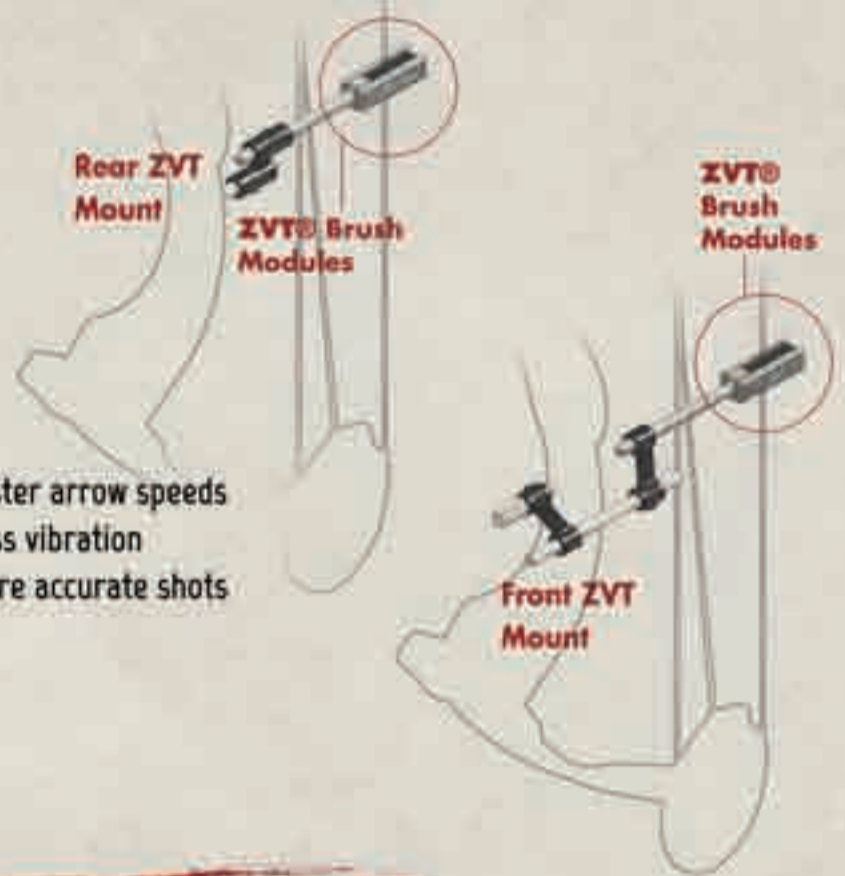

ZVT®  
Brush  
Modules

- Eliminates up to 60% of shot noise & felt vibration
- Increases arrow speeds up to 6 feet per second
- Increases accuracy

## ZVT® Compound

Modern bows produce amazing arrow speeds, however, they also generate accuracy robbing vibration and game-spooking noise. The BloodSport® Zero Vibration Transfer (ZVT®) reduces noise by up to an incredible 60% while eliminating most of the shock felt by the shooter and increases arrow speed by 6fps.

Unlike all other string dampeners and string stops, the BloodSport ZVT® eliminates noise and vibration before it is generated. As the string enters the ZVT® brush modules, it travels forward, unencumbered, providing a full power-stroke and top arrow speeds.

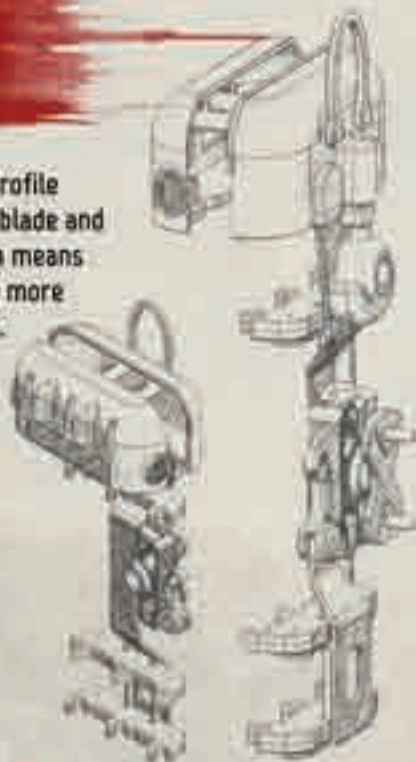

- Faster arrow speeds
- Less vibration
- More accurate shots

## CX3 Quiver

The BloodSport CX3 Quiver's ultra-low profile hood expands open to accept both fixed-blade and mechanical broadheads. Our hood design means no destroyed foam or dull blades and no more broken rubber rings or open broadheads.

- Hood opens for easy access to arrows
- Soft Grip® blended rubber retainers allow one hand removal
- Vibration damping hood
- Auxiliary ball screw mounts quiver to tree

## EX5 Quiver

The BloodSport CX5 Quiver's ultra-low profile is specifically designed for today's mechanical broadheads. Our hood design means no destroyed foam or dull blades and no more broken rubber rings or open broadheads.

- Hood opens for easy access to arrows
- Soft Grip® blended rubber retainers allow one hand removal
- Vibration damping hood
- Auxiliary ball screw mounts quiver to tree

## Crossbow Pod

- Keeps fingers safe
- Pivots for a comfortable grip
- Steadies crossbow
- Provides a solid shooting platform at multiple angles
